Question: The construction of a $\triangle ABC$, given that BC = 6cm, $\angle B = 45^\circ$ is not possible when difference of **AB** and **AC** is equal to

1) 6.9cm
2) 5.2cm
3) 5.0cm
4) 4.0cm

Solution: Using the cosine formula in $\triangle ABC$,

Variable	Description
a	Length of side **BC** = 6cm
b	Length of side **AC**
c	Length of side **AB**
k	$k = b - c$
$\angle B$	45°

TABLE 4: Variables and given data

$$b^2 = a^2 + c^2 - 2ac\cos B \tag{4.1}$$

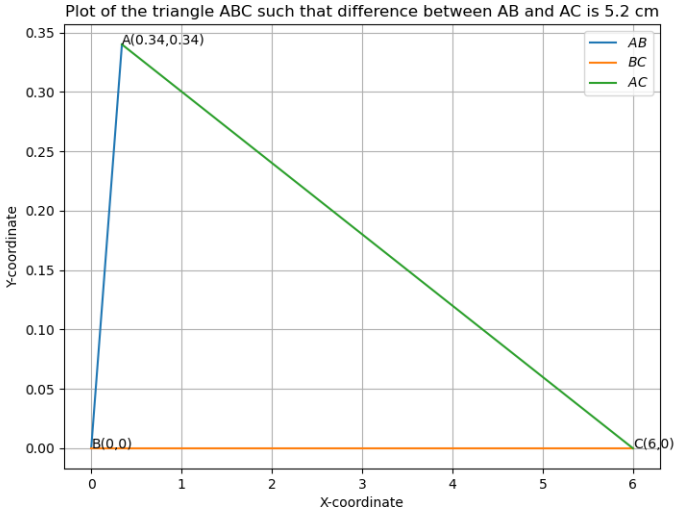
$$(k+c)^2 = a^2 + c^2 - 2ac\cos B \tag{4.2}$$

$$\implies c = \frac{a^2 - k^2}{2\left(k + a\cos B\right)} \tag{4.3}$$

$$c = \frac{36 - k^2}{2\left(k + 3\sqrt{2}\right)} \tag{4.4}$$

$$\tag{4.5}$$

Therefore, $k \leq$ 6cm .



Plot of the triangle ABC such that difference between AB and AC is 5.2 cm
