

ASSIGNMENT-2

AI24BTECH11012-Pushkar Gudla

VECTOR ARITHMETIC(CBSE)

Question: If $(3, 3)$, $(6, y)$, $(x, 7)$ and $(5, 6)$ are the vertices of a parallelogram taken in order, find the values of x and y . (10, 2011)

Solution: Property: midpoints of diagonal coincide. Let \mathbf{O} be the midpoint of the diagonals.

$$\mathbf{O} = \frac{\begin{pmatrix} 3 \\ 3 \end{pmatrix} + \begin{pmatrix} x \\ 7 \end{pmatrix}}{2}$$

from here we get $\mathbf{O} = \begin{pmatrix} \frac{3+x}{2} \\ 5 \end{pmatrix}$, we also have

$$\mathbf{O} = \frac{\begin{pmatrix} 6 \\ y \end{pmatrix} + \begin{pmatrix} 5 \\ 6 \end{pmatrix}}{2}$$

this gives us $\mathbf{O} = \begin{pmatrix} 5.5 \\ \frac{y+6}{2} \end{pmatrix}$

On comparing the above two values of \mathbf{O} , we get the values of x and y as:
 $x = 8, y = 4$
